Peptide H7 comprises amino acid residues 170-199 in the DBF box CC (II) (see AAW30501) of transcription factor DP1. Claimed peptides CC (II) (see AAW30504-07) containing one or both of 2 mortifs (see AAW30502-03) of the DBF box are capable of amergonising the AAW30502-03 of the DBF box are capable of antagonising the creatimerisation of the DBF box are capable of antagonising the claimed are variants of these peptides, especially containing and 175 of DP-1, fusion proteins (III) comprising (I) of (II) and and 175 of DP-1, fusion proteins (III) comprising (I) of (II) and and nost cells. (II) comprising (I) or (II) and containing cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in patients who have undergone cardioplasty. (I)-(III) function by inactivating the DNA-binding cardiovascular of DP-1/E2F dimerisation and as immunoassay agents.

Also described is the use of sequences antisense to nucleic acids cenceding (I)-(III) enhance cell killing.
                                                                                                                                                         Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                              Peptide H3 comprises amino acid residues 174-193 in the DEF box (I) (see AAW30501) of transcription factor DP1. Claimed peptides (II) (see AAW30504-07) containing one or both of 2 motifs (see AAW30504-07) containing one or both of 2 motifs (see AAW30502-03) of the DEF box are capable of antagonising the capable of antagonising the certain of a DP protein with an E2F protein. Also chercifications of these peptides, especially containing of substitutions of residues corresponding to residues 167, 169, 171 and 175 of DP-1, fusion proteins (III) comprishing (I) or (II) and a membrane translocation sequence (see AAW30508), expression vectors coroding (I)-(III) and host cells. (I)-(III) are used to therapeutically to induce apoptosis, specifically in tumour or treat or surgical stents comprising (I)-(III) are used to cardiovascular cells, either in vivo or in vitro, e.g. for purging to antioplasty. (I)-(III) function by inactivating the DNA-binding activity of DP-E2F heterodimers. They are also used as research reagents, as positive controls in assays for identifying antagonists of DP-1/E2F dimerisation and as immunoassay agente.

They are also escribed is the use of sequences antisense to nucleic acids cencoding (I)-(III) to control DP levels in cells, particularly by centoding (I)-(III) enhance cell killing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                       Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis

                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                       Peptide H (I) comprises residues 163-199, i.e. the DEF box region, of transcription factor DP1. Claimed fragments (II) (see AAM30502-07) of (I) are capable of antagonising the heterodimerisation of a DP protein with an E2F protein. Also claimed are fusion proteins (III) comprising (I) or (II) and a membrane translocation sequence (see AAM30508), expression vectors encoding (I)-(III) and host cells. (I)-(III) are used therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vitro, e.g. for purging bone marrow. Surgical stents comprising vitro, e.g. for purging bone marrow. Surgical stents comprising (I)-(III) are used to treat or prevent restenosis in patients who have undergone angioplasty. (I)-(III) function by inactivating the DNA-binding activity of DP/E2F heterodimers. They are also insentifying antagonists of DP-1/E2F dimerisation and as immunoassay
                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                               inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                       agents. Also described is the use of sequences antisense to nucleic acids encoding (1)-(III) to control DP levels in cells, particularly by gene therapy. When formulated with cytotoxic or cytostatic agents, (1)-(III) enhance cell killing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              E2F-dimerisation partner; DP protein; E2F transcription factor; G1 phase; S phase; cell cycle; retinoblastoma protein; alter cell proliferation.

New isolated, enriched, cell free and/or recombinant nucleic acid useful for e.g. altering cell proliferation characteristic such as to alter plant cell, organ or tissue size -
                                                                                                                                                                                       (DP) processor. Laggments of a wheat E2F-dimerisation partner (DP) process. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active, transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a hetero-dimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly to alter cell proliferation characteristic such as to alter plant cell, organ or tissue shape,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAW30504
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                           This sequence represents 42% of the middle region of soybean cell cycle regulatory protein DP-1, as deduced from an isolated collar conscious (see AAZ34575). The invention relates to nucleic acid fragments (see AAZ34575-83) encoding plant CDC-16, DP-1, DP-2 and E2F cell cycle regulatory proteins (see AAZ32159-67). It also crelates to the construction of a chimeric gene encoding allor a portion of the cell cycle regulatory protein, in sense or antisense orientation, where expression of the chimeric gene results in producton of altered levels of the cell cycle regulatory protein in a transformed host cell. The nucleic acids and protein in cused to facilitate studies of cell cycle regulation in plants, cused to facilitate studies of cell cycle regulation in plants, convide genetic tools to enhance cell growth in tissue culture, increase gene transfer efficiency and provide nore stable transfer reficiency and provide targets to transfer the protein may also provide targets to facilitate design and/or identification of cell cycle regulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Peptide HZmt2 is based on peptide H2 (see AAW10504) from the DEF box (see AAW30501) of transcription factor DP1. In HZmt2, amino acid residues of H2 that correspond to DP1 residues Arg167 and Asp171 are substituted by Ala residues. H2 is an antagonist of the heterodimerisation of DP1 with E2F. HZmt2 retains some, but not all, of this antagonistic activity. H2 and other claimed peptides (see AAW30504-07) from the DEF box region of DP1 can be used to induce apoptosis, specifically in tumour and cardiovascular cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GapB
                                                                                                                                                                                                                                        Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour;

```
Peptide H2 comprises amino acid residues 166-184 in the DEF box (I) (see AAW30501) of transcription factor DP1. Claimed peptides (II) (see AAW30504-07) containing one or both of 2 motifs (see AAW30502-03) of the DEF box are capable of antagonising the Claimed are variants of these peptides, especially containing substitutions of residues corresponding to residues 167, 169, 171 and 175 of DP-1, fusion proteins (III) comprising (I) or (II) and a mebrane translocation sequence (see AAW30508), expression vectors encoding (I)-(III) and host cells. (I)-(III) are used to therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vitro, e.g. for purging bone marrow. Surgical stents comprising (I)-(III) are used to treat or prevent restenosis in patients who have undergone angioplasty. (I)-(III) function by inactivating the DNA-binding angioplasty of DP-E2P heterodimers. They are also used as research reagents as positive controls in assays for identifying antagonists of DP-1/E2P dimerisation and as immunoassay agents. Also described is the use of sequences antisense to nucleic acids encoding (I)-(III) enhance cell killing.
Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis

(CROP-) CROPDESIGN NV.

New cell cycle protein and nucleic acid molecule encoding it useful for regulating cell cycle progression in plants and for identifying modulators which are useful as herbicides or plant growth regulators -WPI; 2002-062249/08.

Magyar Z;

Acosta JAT,

The invention relates to a novel cell cycle protein (CCP) and the polynucleotides encoding them. CCP is useful for identifying a compound which modulates the activity of the polypeptide and which binds to the polypeptide and an anti-CCP antiobdy is useful for detecting the presence of CCP in a sample. A CCP antiobdy is useful for modulating the cell cycle or growth of a plant such as Arabidopsis thalians, rice, wheat, maize, tomato, alfalfa, oilseed rape, sobbean, sunflower and canola. CC cycle or growth oilseed rape, sobbean, sunflower and canola. CC protein or groudction of CCP protein forms which have decreased or agents in regulating cell cycle progression in plants. CCP is useful to treat disorders characterised by insufficient or excessive production of CCP protein or production of CCP protein forms which have decreased or aberrant activity. Compounds that bind to or modulate the activity of CMP polymelectide is useful as nerbicides or plant excellators. The polymucleotide is useful for modifying cell fate, plant development, plant morphology, biochemistry and/or physichology, the length of the GI, S, G2 and/or M phase of the cell cycle of a plant, initiation, promotion, stimulation or enhancement of cell division, DNA replication, seed set, send development, tuber, fruit, leaf formation, shoot and root initiation and/or development, tuber, fruit, leaf formation, seed act, colerance or resistence to etress CCP, the polymucleotide cord initiation and/or activity of a protein involved in the cell cycle due cold, nutrient deprivation, hat, drought, salt stress, or biotic stress such as pathogen attack, to modulate e.g. enhance crop yields, and attenuate plant architecture, plant quality traits, plant reproduction and seed development, endoreduplication in storage cells, corage tissues and/or storage organs of plants or its parts. CCP manners and or naturally occurring CCP much, or a genetic cold, nutrient deprivation, redeted evelopment, endoreduplication is genetal as an immunogen to generate antibodies. CC lesion in a CCP gene and to modulate CCP activity. The present sequence represents a motif which may be found in a CCP protein of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antiboteriai, antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein;
                                                                                                                                                                                                                                                                                                                                        Peptide H4 comprises amino acid residues 185-199 in the DEF box region (see AAW30501) of transcription factor DP1. Unlike claimed peptides (see AAW30504-07) that contain one or both of 2 motifs (see aAW30502-03) of the DP1 DEF box, peptide H4 is not capable of antagonising the heterodimerisation of a DP protein with an E2F protein. The claimed peptides, their variants and fusion proteins can be used to induce apptosis, specifically in tumour and cardiovascular cells, e.g. to prevent restenosis.
                                                                                                                                                                  Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human musculoskeletal system related polypeptide SEQ ID NO 1380.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 49.5%; Score 50; DB 19; Length 15; 100.0%; Pred. The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, ogstrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hammolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 11; SEQ ID NO 1380; 781pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Barash SC, Ruben SM,

The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful cordetecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions such as thrombosis, can treat and prevent conditions, such as, Alzhehmer's disease, Parkinson's disease, and neuronal damage occurring in certain disorders or neurodegenerative conditions, such as, Alzhehmer's disease, Parkinson's disease, and AIDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or bone grafts; prevents skin aging due to subburn by stimulating keratinocyte growth; prevents hair loss, since FGF family conserved and differentiation of hematopoietic cells and bone stimulates growth and differentiation of hematopoietic cells and bone arrows acils when used in combination with other cytokines; maintains organs before transplantation or for supporting cell culture of primary tissues; increases the differentiation or proliferation of embryos; increases the differentiation or proliferation of embryos; increases the differentiation or proliferation of embryos; increases the differentiation or colour, every embryonic stem cells besides, had an encount of the embryonic stem cells, such as, body height, weight, hair colour, every colour, skin, percentage of adipose tissue, pigmentation, is and shape (e.g., cosmetic surgery); modulates mammalian metabolism; changes carlcadic rhythms, depression, tendency for violence, tolerance for pain, carlcadic rhythms, depression, tendency for violence, tolerance for pain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 11; SEQ ID NO 1380; 321pp; English.

The invention relates to a novel cell cycle protein (CCP) and the polynucleotides encoding them. CCP is useful for identifying a compound polynucleotides encoding them. CCP is useful for identifying a compound which modulates the activity of the polypeptide and which binds to the polypeptide and an anti-CCP antibody is useful for modulating the presence of CCP in a sample. A CCP modulator is useful for modulating the cell cycle or growth of a plant such as Arabidopsis thaliana, rice, wheat, maize, tomato, alfalfa, oilseed rape, soybean, sunflower and canola. CCP nucleic acid and polypeptide molecules are useful as modulating agents in regulating cell cycle progression in plants. CCP is useful to treat disorders characterised by insufficient or excessive production of treat disorders characterion of CCP protein forms which have decreased or aberrant activity. Compounds that bind to or modulate the activity of CCP polypeptide are useful as herbicides or plant growth regulators. The polynucleotide is useful for modifying cell fate, plant development,
                                                                                                                                                                                                                                                                               Cell cycle protein; CCP; cell cycle regulation; herbicide; plant growth regulator; plant development; abiotic stress; biotic stress; nutrient deprivation; pathogen attack; crop yield; immunogen; mutant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cell cycle protein and nucleic acid molecule encoding it useful for regulating cell cycle progression in plants and for identifying modulators which are useful as herbicides or plant growth regulators

stimulation or palancement of cell division, property, seed set, stimulation or enhancement of cell division, DNA replication, seed set, seed size, seed development, tuber, fruit, leaf formation, seed set, seed size, seed development, tuber, fruit, leaf formation, shoot and root initiation and/or development, tuber, fruit, leaf formation, shoot and root initiation and/or development, module function, dwarfism in plants, senescence, tolerance or resistance to stress. CCP, the polynuclectide and the anti-CCP antibody are useful in agriculture to modulate the protein levels or activity of a protein involved in the cell cycle due to environmental conditions, including abiotic stress such as cold, nutrient deprivation, heat, drought, salt stress, or biotic and attenuate plant architecture, plant quality traits, plant reproduction and seed development, endoreduplication in storage cells, storage tissues and/or storage organs of plants or its parts. CCP is useful as an immunogen to generate antibodies. CCP protein is useful to screen for naturally occurring CCP substrates. The polymuclectide is cueful for expressing CCP protein, of detect CCP mRNA, or a genetic lesion in a CCP gene and to modulate CCP activity. The present sequence represents a deletion mutant of a CCP protein of the invention.

                                                      are substituted by Ala residues, behaves in a similar fashion to the wild-type H2 peptide in its ability to inactivate E2F site DNA binding activity in D9 EC cell extracts. H2 is an antagonist of the heterodimerisation of DP1 with E2F. Thus, the Val-169 and Val-175 residues of H2 play little role in this activity. H2 and other claimed peptides (see AAW30504-07) from the DBF box region of DP1 can be used to induce apoptosis, specifically in tumour and cardiovascular cells, e.g. for the prevention of restenosis.
                                                                                                                                                                                                                                                                   Gaps
         Peptide H2mtl is based on peptide H2 (see AAW30504) from the DEF box (see AAW30501) of transcription factor DP1. The H2mtl peptide, in which H2 residues corresponding to DP1 residues Val169 and Val175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide H5 comprises amino acid residues 168-183 in the DEF box (I) (see AAW30501) of transcription factor DP1. Claimed peptides (II) (see AAW30504-07) containing one or both of 2 motifs (see AAW30502-03) of the DEF box are capable of antagonising the heterodimerisation of a DP protein with an E2F protein. Also claimed are variants of these peptides, especially containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour;

                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This represents a compound that can inhibit E2F activity. The compound is of the formula R1 - A - R2 where R1 is an optionally substituted alkanoyl, alloyl, hetero-arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, hetero-aryloxycarbonyl, or H, R2 is OH, or optionally substituted alkoxy or amino, and A is an E2F family dimer forming region or DNA binding
embatitutions of residues corresponding to residues 167, 169, 171

and 175 of DP-1, fusion proteins (III) comprising (I) or (II) and a membrane translocation sequence (see AAW30508), expression vectors encoding (I)-(III) and host cells. (I)-(III) are used to therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vitro, e.g. for purging bone marrow. Surgical stents comprising (I)-(III) are used to treat or prevent restenosis in patients who have undergone angioplasty. (I)-(III) function by inactivating the DNA-binding cativity of DP/EZP heterodimers. They are also used as research reagents, as positive controls in assays for identifying antagonists of DP-1/E2P dimerisation and as immunoassay agents. C Also described is the use of sequences antisense to nucleic acids encoding (I)-(III) to control DP levels in cells, particularly by gene therapy. When formulated with cytotoxic or cytostatic agents, (I)-(III) enhance cell killing.

The compound is of the formula R1 - A - R2 where R1 is an optionally substituted alkanoyl, alloyl, hetero-arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, hetero-aryloxycarbonyl, or H, R2 is OH, or optionally substituted alkoxy or amino, and A is an E2F family dimer forming region or DNA binding can be used to inhibit E2F activity, and are useful in the treatment and prevention of tumours and arteriosclerosis.

The present invention relates to a new method of modulating expression of telomerase reverse transcriptase (TERT) from a TERT expression system that includes a TERT promoter and a Site C repressor binding site. The method of the invention involves modulating TERT transcription repression by the Site C repressor binding site. The method of the invention is useful for modulating expression of TERT for production is antibody. The method is also useful in a variety of different applications, including immortalisation of cells, production of reagents consening applications. Increasing TERT expression therapeutic applications, and the chimson-dilator shortening and/or increasing TERT expression delays natural telomeric shortening and/or increasing telomeric length and selections and to inhibit immune sensecence. The method can be employed to lengthen telomeres of cardiovascular disease, osteoporosis, in skin rejuvenation and to inhibit immune sensecence. The method can be employed to lengthen telomeres of steoblast and osteoclast stem cells, encouraging bone replacement and proper remodeling and reinforcement, and can thus be used in bone marrow transplants for the treatment of encouraging bone replacement and cutting and as such the method improves the survival and effectiveness of
                                                              Human, telomerase reverse transcriptase, TERT; Site C; Progeria; burn; repressor binding site; Hutchinson-Gilford syndrome; AIDS; cancer; acquired immunodeficiency syndrome; cardiovascular disease; osteoporosis; skin rejuvenation; immune senescence; bone marrow transplant; skin graft; neoplastic disease; TERT minimal promoter; DNA binding domain; E2F-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modulating expression of telomerase reverse transcriptase (TERT) in a cell, for regulating proliferative capacity of a cell, involves modulating TERT transcription repression by Site C repressor binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful for treating cellular proliferative disease conditions, inc
neoplastic disease conditions e.g. cancer. The present amino acid
sequence represents the human DNA binding domain E2F-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bone marrow and skin cell transplants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide HZmt3 is based on peptide H2 (see AAW30504) from the DEF box (see AAW30501) of transcription factor DP1. In HZmt3, amino acid residues of H2 that correspond to DP1 residues Leul73 and Leul76 are substituted by Arg residues. H2 is an antagonist of the heterodimerisation of DP1 with B2P. HZmt3 has none of the antagonistic activity of H2. H2 and other claimed peptides (see AAW30504-07) from the DEP box region of DP1 can be used to induce apoptosis, specifically in tumour and cardiovascular cells, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

This peptide comprises amino acid residues 175-183 in the DEF box region (see AAW30501) of transcription factor DP1. Claimed peptides (11) (see AAW30502-07) containing this and/or another motif (see AAW30503) of the DEF box, are antagonists of the heterodimerisation of a DP protein with an E2F protein. Also claimed are variants of these peptides, especially containing substitutions of residues corresponding to residues 167, 169, 171 and 175 of DP-1, fusion proteins (III) comprising (1) or (II) and a membrane translocation sequence (see AAW30508), expression vectors encoding (1)-(III) and specifically in tumour or cardiovascular cells, either in vivo or vitro, e.g. for purging bone marrow. Surgical setups omprising control of 10-(III) are used therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or vitro, e.g. for purging bone marrow. Surgical setups on emprising control of 10-(III) are used therapeutically to induce apoptosis, the DNA-binding activity of DF/E2F heterodimers. They are also case and a sessor of the DNA-binding activity of DF/E2F heterodimers. They are also dentifying artagonists of DP-1/E2F dimerisation and as immunoassay agents. Also described is the use of sequences antisense to mucleic acids encoding (I)-(III) to control DP levels in cells, control and as immunoassay and control and a sumunoassay control and a
                                                                                                                                                                                                                                                                                                                                     Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4AY37764
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to modulating expression of telomerase reverse transcriptase (TERT) expression system that includes a TERT promoter and a Site C repressor binding site. The method involves modulating TERT transcription repression by the Site C repressor binding site. The methods and compositions of the present invention are useful for the immortalization of cells, production of reagents in life science research, therapeutic agent screening applications diagnosis and treatment of disorders associated with aberrant telomerase activity such as cancer, Progeria, immune senescence, HIV, and in skin rejuvenation. The present sequence represents the DNA binding domain of a repressor protein E2P-1.
                                                                                                                                                                                               Telomerase reverse transcriptase; TERT; Site C repressor; transcription; cytostatic; immunostimulant; anti-HIV; vulnerary; telomerase; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modulating expression of telomerase reverse transcriptase TERT by blocking repression of TERT transcription, useful for the diagnosis and treatment of disorders associated with aberrant telomerase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour; surgical stent; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1,

                                                                                                                                                                                                                                                                                 AAY36754-Y17949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; secreted protein; cancer; tumour; developmental abnormality; foetal deficiency; blood disorder; immune system disorder; inflammation; autoimmune disease; allergy; Alzheimer's disease; cognitive disorder; schizophremia; arthritis; sathma; psoriasis; sepsis; skin disorder; atherosclerosis; diabetes; cardiovascular disorder; kidney disorder; digestive disorder; endocrine disorder; infection; AIDS.
                                                                                                                                                                                                                                                                                                                                                   diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and veneral lymphogramulomatosis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

the 110 human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 110 genes, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, developmental abnormalities and feetal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, achizophremia, arthritis, asthma, psoriasis, sepsis, skin disorders, achizophremia, arthritis, asthma, psoriasis, alsorders, kidney disorders, digestive/endocrine disorders, infections and ALDS. The polypeptides are also useful for identifying their binding the polypeptides are also useful for identifying their binding contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoded by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAX97916 to AAX98029 represent 110 isolated human secreted protein
genes. AAX36224 to AAX36727 represent the secreted proteins encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated human genes encoding secreted polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          KC, Duan RD, Feng P, Ferrie AM, Florenc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       designated ORF (open reading frame) 1-4334 movel numning proteins designated ORF (open reading frame) 1-4334, and sequences ABNY5034-ABNY5087 represent conversation them. The invention also encompasses polypeptides at least 804 identical to the ORF1-ORF434 (collectively) creferred to as ORFX) proteins, polynucleotides at least 8054 identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX the ORFX proteins, methods of Screening for modulators of ORFX proteins, antibodies polypeptides, methods of screening individuals for a predisposition to an operativity, and methods of screening individuals for a predisposition to an operativity, and methods of screening individuals for a predisposition to an open of biological activities, society as creening individuals for a predisposition to an open of biological activities, society activity, themetopolesis regulation, cell differentiation, immune modulation, haematopoiesis regulation, cell differentiation, immune modulation, haematopoiesis regulation, clissue growth, angiogenesis, activinto, tumour inhibit activity, activity, receptor/ligand, antiinflammatory activity, tumour inhibition activity, and antiinflective activity, and may also be involved in the determination of bodily characterisatios, fertility and behaviour. ORFX proteins, other proliferative disorders such as spilepsy and Albahemer's disease, contact the contact of ancers, other proliferative disorders such as spilepsy and Albahemer's diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cardiovascular diseases, immune system disorders, disorders related to organ transplantation, disorders of tissue growth and regeneration, disorders of tissue growth and regeneration, disorders of tissue growth and regeneration, diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester storage disease, and infectious diseases caused by viral, bacterial, fungal and other pathogens. ORFX nucleic acids may also be used as a source of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous sequences, in genetic diagnosis, and in forensic biology. The ORFX nucleic acids may additionally be used to produce transgenic animals shich may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases.

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protein #2256 encoded by probe for measuring heart cell gene expression.
                                                                Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver -
                      Peptide #2343 encoded by human foetal liver single exon probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 27; SEQ ID NO 27472; 639pp + sequence listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, gene expression, heart, microarray, vascular system,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 47 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label contacting the expression of regions of genomic DNA predicted to verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias chan expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                        Peptide #2310 encoded by breast cell single exon nucleic acid probe.

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                      Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; bone marrow expressed exon; gene expression analysis; probe; microarray; cancer; leukaemia; lymphoma; myeloma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human bone marrow expressed probe encoded protein SEQ ID NO: 28331.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 4; SEQ ID NO: 28331; 658pp + Sequence Listing; English

                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA1305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠ
                                                                                                                                                                                                                    ö
probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide #2277 encoded by probe for measuring cervical gene expression.

The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                         Peptide #2390 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel single exon nucleic acid probes (see AA100010-AA110067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                          Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human peptide encoded by genome-derived single exon probe SEQ ID 27217.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; single exon probe; asthma; lung cancer; COPD; LLD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histlocytosis; lymphangioleiomyomtosis; Karagener syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel single exon nucleic acid probe used to measuring gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
Peptide #2263 encoded by probe for measuring breast gene expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABG37552;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 33
```

```
The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. His oincluded are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with sample derived from human lung, comprising (a) contacting the array with a array; identifying exons in a eukaryotic gene expression of detectably labeled nucleic acids derived from human lung, comprising (a) contacting the array with a array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, and the above mentioned introarray seafighting exons in the probes from genomic sequence by the method above and (b) measuring the expression of each of the exons in several comprising (a) identifying exons from genomic sequence by the method above and ofor cell types using hybridisation to a single exon it is several expression of the exons in the tissues and/or cell types indicates that expression of the exons in the tissues and/or cell types indicates common partern of expression and/or cell types with the exons subside exons in the specification, or encoded by the expression of the exons in the probes are used for gene components and probes are use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    haemosiderosis, pulmonary historytosis, lymphangioleiomytosis, pulmonary haemosiderosis, pulmonary bulmonary bulmonary bulmonary bulmonary bulmonary bulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples -
pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension; hyaline membrane disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the encoded proceins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymolectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. steem cell growth factor activity, nemanopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) antino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) to proteins and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For treatment of diseases associated with decreased expression by rectifying mutations or deletions in a patient's genome cypression by rectifying mutations or deletions in a patient's genome contact affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) supplement the patients own production of (I). Additionally, (I) colynucleotides may be used to produce the secreted (I), by inserting protein. (I) proteins and polynucleotides may be used to prevent, concers and carcer metastases of haematopoietic-related diseases, especially cancer metastases of haematopoietic-derived cells. AAK64703 concers and carcer metastases of haematopoietic antigen genomic concers and carcer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK84950 and AAM82169 crepresent invention. AAK54942 to AAK84950 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 co AAK87694 represent human immune/haematopoietic antigen genomic cequences from the present invention. AAK54921 to AAK5450 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                multiple sclerosis; diabetes; genetic disorder; wound; burn; infection; arthritis; cytostatic; immunomodulator; nootropic; neuroprotective; antiparkinsonian; antidiabetic; immunosuppressive; dermatological; haemostatic; vulnerary; fungicide; antibacterial; virucide; protozoacide;

```
The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful coding protein or complementary sequences. The polynucleotides are useful cfor identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating and identifying and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Carinson's or Alzheimer's disease), autoimmune diseases (multiple of sclerosis, diabetes, lupus) genetic disorders, wound, burns, incision, closers, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, comparabitic), arrhrities, etc.

Co parasitic), arrhrities (archis patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fib. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, telomerase reverse transcriptase, TERT; Site C; Progeria; burn, repressor binding site; Hutchinson-Gilford syndrome; AIDS; cancer; acquired immunodeficiency syndrome; cardiovascular disease; osteoporosis; skin rejuvenation; immune sensecence; bone marrow transplant; skin graft; neoplastic disease; TERT minimal promoter; DNA binding domain; B2F-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modulating expression of telomerase reverse transcriptase (TERT) in a

The present invention relates to a new method of modulating expression of telomerase reverse transcriptase (TERT) from a TERT expression system of telomerase reverse transcriptase (TERT) from a TERT expression system that includes a TERT promoter and a Site C repressor binding site. The method of the invention is entered to be the site C repression of TERT for producing a mammalian to be the Site C repression of TERT for producing a mammalian settli for modulating expression of TERT for production of reagents of the method is also useful in a variety of different applications, including immortalisation of cells, production of reagents for use in life science research, therapeutic applications and the saperic agent screening applications. Increasing TERT expression cells, useful for treating disease conditions such as Progeria or delays natural telomeric shortening and/or increases telomeric length and is useful for treating disease conditions such as Progeria or Cardiovascular disease, osteoporosis, in skin rejuvenation and to inhibit cimmume sensescence. The method can be employed to lengthen telomeres of ortoper remodeling and reinforcement, and can thus be used in bone marrow transplants for the treatment of cancer and skin grafts for burn victims and as such the method improves the survival and effectiveness of the confittions even conditions even conditions, including cellular proliferative disease conditions, including centil for treating cellular proliferative disease conditions, including centil for treating cellular proliferative disease conditions, including center the human DNA binding domain E2F-4.

                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                      1,
                          The invention relates to modulating expression of telomerase reverse transcriptase (TERT) expression system that includes a TERT promoter and a Site C repressor binding site. The method involves modulating TERT transcription repression by the Site C repressor binding site. The methods and compositions of the present invention are useful for the immortalization of cells, production of reagents in life science research, therapeutic agent screening applications diagnosis and treatment of disorders associated with aberrant telomerase activity such as cancer, Progeria, immune senescence, HIV, and in skin rejuvenation. The present sequence represents the DNA binding domain of a repressor protein E2P-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver. comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis,
                                                                                                                                                                                                                                                                                                      Gaps

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG41348-ABG59930 represent human liver single exon encoded peptides of the invention.

The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphona, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide #7138 encoded by probe for measuring placental gene expression.
                                   Human; bone marrow expressed exon; gene expression analysis; probe; microarray; cancer; leukaemis; lymphoma; myeloma.
Human bone marrow expressed probe encoded protein SEQ ID NO: 33175.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow -

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                            Human brain expressed single exon probe encoded protein SEQ ID NO: 32350.

Sequence 3, Application US/09900147
; Sequence 3, Application US/09900147
; Patent No. US20020103121A1
; GENERAL INFORMATION:
; APPLICANT: La Thangue, Nicholas B
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; FILE REFERENCE: 620-67
; CURRENT FILING DATE: 2001-07-09
; PRIOR FILING DATE: EARLIER FILING DATE: 1999-05-27
; PRIOR FILING DATE: EARLIER FILING DATE: 1996-12-20
; NUMBER OF SEQ ID NOS: 18
; SCOFTWARE: PatentIN Ver. 2.1
; SEQ ID NO 3
; LENDIN: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OTHER INFORMATION: Description of Artificial Sequence: Synthetic

Patent No. 626834

GENERAL INFORMATION:

APPLICANT: La Thangue, Nicholas B

APPLICANT: Bandara, Lasantha R

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE REFERENCE: 620-67

CURRENT APPLICATION NUMBER: US/09/308,935

CURRENT PILING DATE: 1999-05-27

EARLIER APPLICATION NUMBER: PCT/GB97/03506

EARLIER APPLICATION NUMBER: PCT/GB97/03506

EARLIER APPLICATION NUMBER: PCT/GB97/03506

EARLIER APPLICATION NUMBER: GB 9626589.7

EARLIER PILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 4

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 6, Application US/09308935

Sequence 1, Application US/09308935

Patent No. 6268334

GENERAL INFORMATION:

APPLICANT: La Thangue, Nicholas B

APPLICANT: Bandara, Lasantha R

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

FILE REFERENCE: 620-67

FILE REFERENCE: 1999-05-27

CURRENT FILING DATE: 1999-05-27

EARLIER APPLICATION NUMBER: PCT/GB97/03506

EARLIER APPLICATION NUMBER: B 9626589.7

EARLIER FILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 18

SOFTWARE: PatentIN Ver. 2.1

SEQ ID NO 1
